

STAGHORN FERN

Platycerium spp.

An epiphytic fern mounted on wood.
Its specialized fronds and shield base
allow it to thrive in trees.

MERCCShop.com

FERTILE FRONDS

Long, antler-like fronds
that bear spores on
their undersides.

THE MOUNT

WIRE HANGER
Hanging the plant
easily.

VENTILATION HOLES
For air circulation and
prevent excess
moisture buildup
on the mount.

SHIELD FRONDS (BASAL FRONDS)

Round, flattened fronds that
adhere to the mount.
They protect the root ball,
trap debris, and help retain
moisture and nutrients.

SPHAGNUM MOSS LAYER

Holds moisture around the
root ball and provides a
stable, airy environment.

ROOTS

Anchor into the moss and
organic material, absorbing
moisture and nutrients.

ORGANIC MEDIUM

Mixture of orchid bark
and charcoal that supports
root growth, ensures
excellent aeration
and drainage.

WOODEN MOUNT

Provides support and
simulates a tree surface
in the fern's natural
epiphytic habitat.

BACK OF MOUNT

BUILT FOR DURABILITY
Reinforced back
supports the
mount and
plant structure.

VENTILATION HOLES
Maintain airflow
and prevent
moisture
accumulation.

HANDCRAFTED QUALITY
Made with
care for long-
lasting growth.
